On My Disk User Guide

Welcome to On My Disk — your private personal cloud platform. Unlike traditional cloud services, On My Disk keeps your files and data on your own devices, ensuring full control and privacy.

1. Getting Started

Getting started is easy: just name your device and accept the Terms of Service, GDPR, and cookie policy:

Next, choose a folder on your device to start sharing files and collaborating with other users.

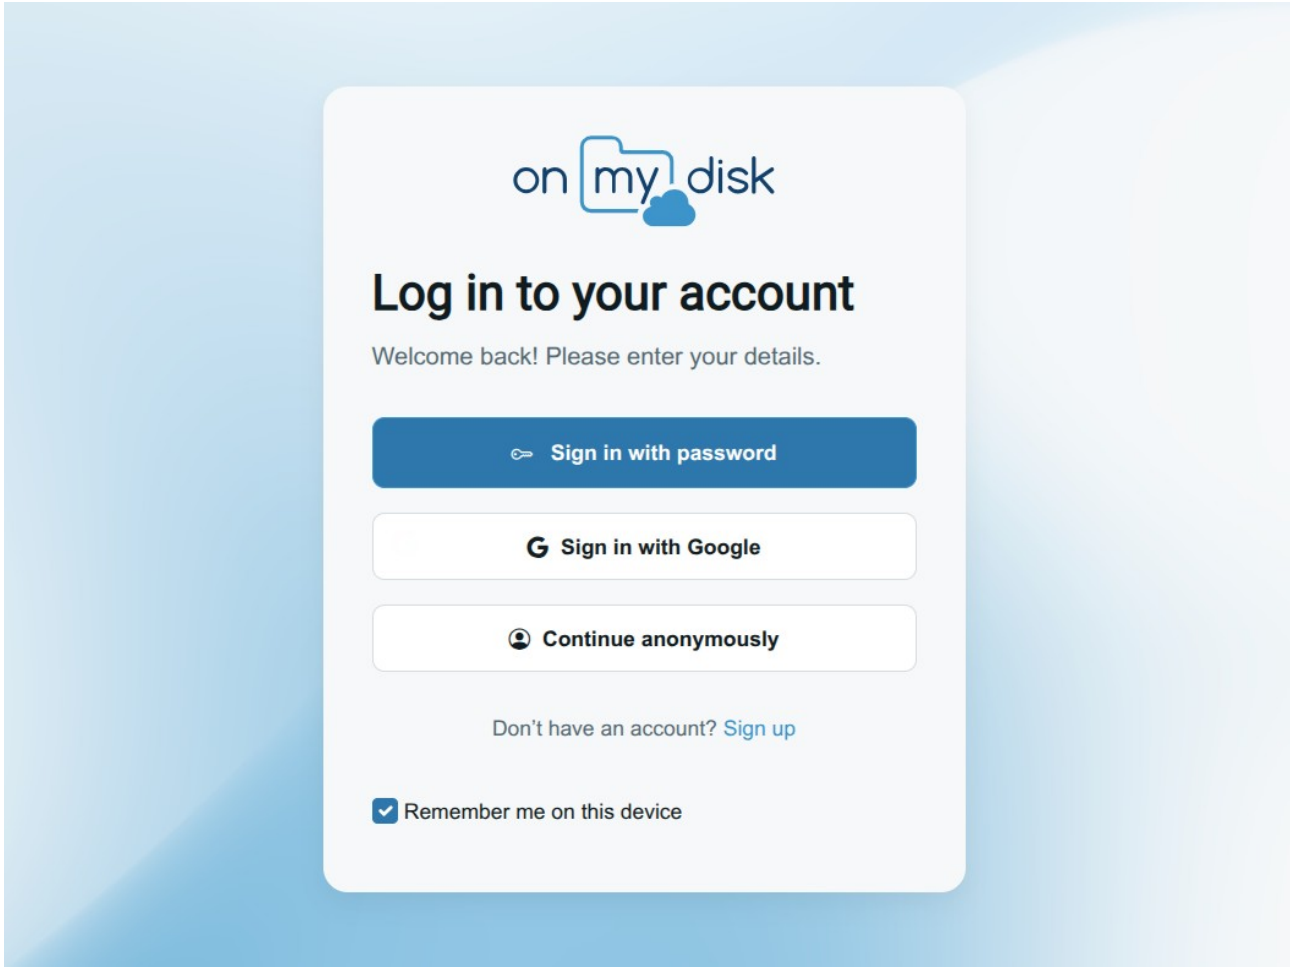

You can skip this step, prepare the folder on your computer and add it to your On My Disk workspace later.

2. Sign In

Anonymous Login

You can start using On My Disk instantly right after on-boarding. By default, account creation is optional, and you are free to use the service completely anonymously. However, for multi-device synchronization or advanced features, you should sign in with Google or create an On My Disk account.

> *Anonymous account data is stored on your device. Since On My Disk works directly with the real file system, clearing your browser cache will not result in the loss of your files.*

Sign in with Google

To keep things simple and reduce the number of passwords you need to manage, you can sign in with your Google account:

1. Click the Anonymous icon at the bottom of the left sidebar.
2. Select Sign in with Google.
3. Sign in on your other devices (mobile, laptop, or workstation) to link them to your account.
4. After authorization, all your devices, chats, and settings will be synchronized.

Create an On My Disk Account

If you prefer to use a separate account:

1. Click on the profile icon and select Sign up.
2. Enter your Email and create a password.
3. An activation link will be sent to the specified address.
4. Click the link in the email to confirm your registration.

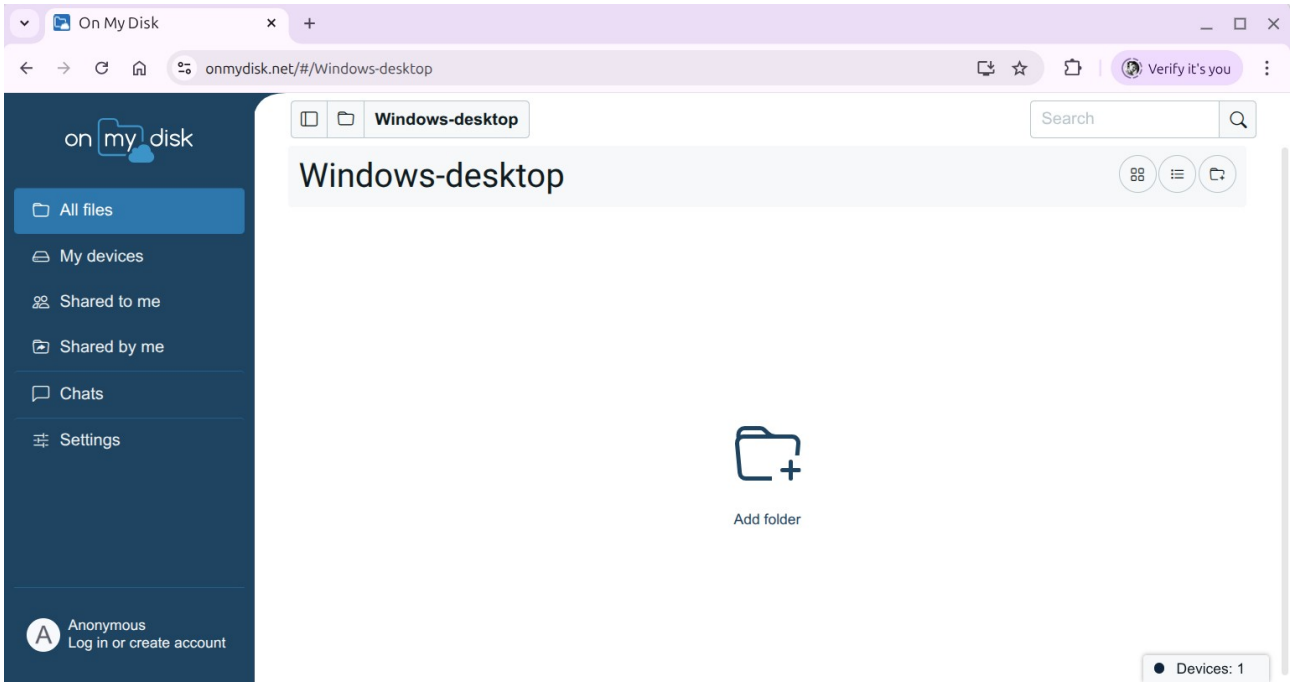

> *If the email doesn't arrive within a few minutes, be sure to check your SPAM folder. Registration confirmation emails sometimes end up there by mistake.*

2. Connecting Folders

On My Disk allows you to turn any folder on your computer into part of your personal cloud.

You can add a folder in several ways:

1. During On-boarding: The system will prompt you to select a folder during the first run.
2. In the Device Interface: Go to your device (under the My devices section) by double-clicking it. If there are no folders yet, the *Add folder* button will be right in the center of the screen. If folders already exist, use the plus icon in the top toolbar.

After adding, the folder will appear in the *All files* → *<Device Name>* section on all your connected devices.

3. Working with Files (File Manager)

The file manager interface is intuitive and functional.

Main Sections (Sidebar):

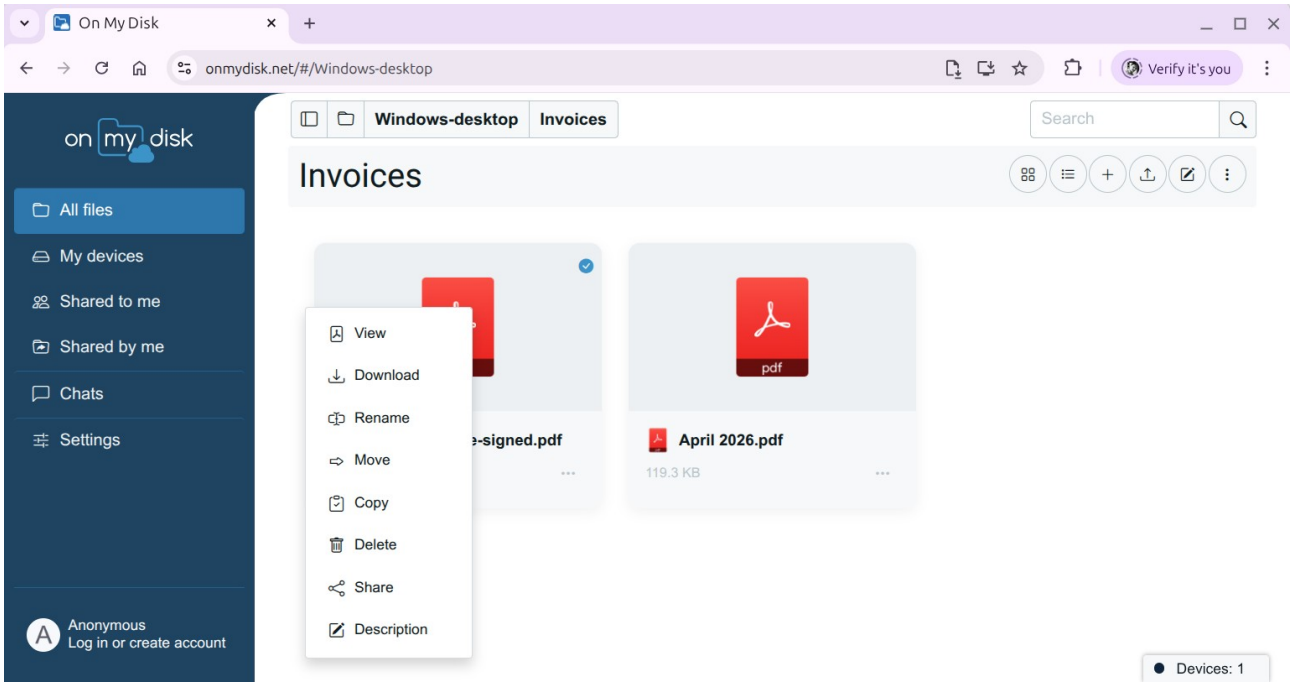

- All files: A general view of all your devices and connected folders.
- My devices: A list of your physical devices.
- Shared to me / Shared by me: Access to shared resources.
- Chats: Access to the AI assistant.

File Operations:

- View: Click on a file to open it in the built-in viewer (supports PDF, images, video, text documents).
- Upload: Use the Upload button or simply drag and drop files into the browser window.
- Search: The search field in the top right corner helps you instantly find any document by name.

Context Menu

Right-click on a file or folder to open the quick actions menu:

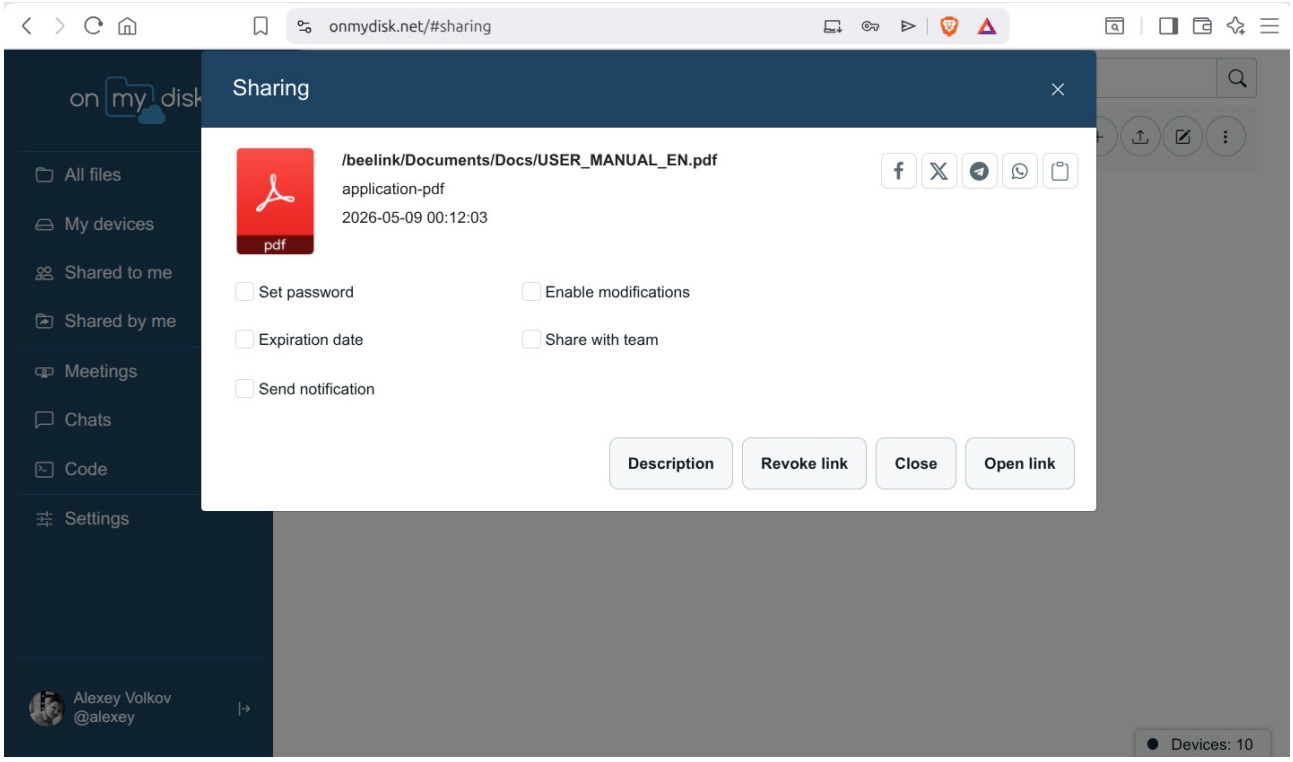

- *Open/View:* Opens the file in the built-in viewer or editor.
- *Download:* Saves the file to your current device. For multiple files, a Download as ZIP action is available.
- *Rename:* Change the name of the file or folder.

- *Copy/Move:* Choose a destination path to duplicate or transfer data.
- *Delete:* Permanently remove the object from storage.
- *Share:* Create a public link or configure access permissions (see the section below).
- *Sign:* Apply an electronic signature to PDF documents (available in Premium plans).

4. Creating Links and Sharing

On My Disk allows you to safely share files and folders with others.

Public Links

To create a link to a file or folder:

1. Right-click on the object and select Share.

2. In the window that appears, you can:

- *Set a password:* Only people with the password will be able to see the content.
- Expiration date: The link will automatically stop working after a selected time (15 minutes, an hour, a day, etc.).
- *Allow changes:* If enabled, other users will be able to upload files to your folder or edit documents.
- *Share with Team:* The file or folder will appear in the 'Shared with me' section for all your team members (available in Premium plans).

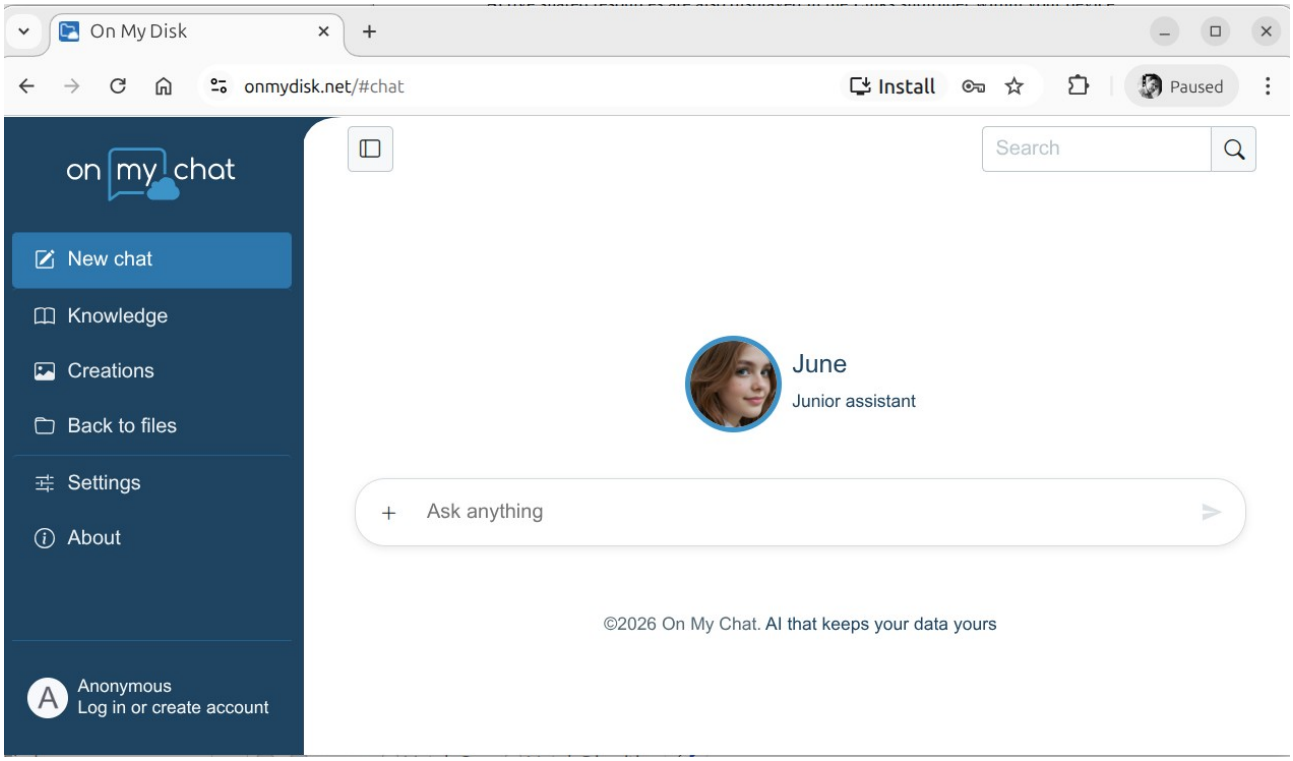

3. Click Create link, and then copy the resulting address.

Access Management

- All links you create can be found in the Shared by me section.
- There, you can change link settings at any time or completely revoke access using the Revoke link button.
- Active shared resources are also displayed in the Links sub-folder within your device.

5. Chat and AI Assistant (On My Chat)

On My Chat is your personal AI assistant (default persona — June, junior assistant) that uses your local data as its knowledge base.

Key Features:

- *Knowledge:* The assistant has access to your connected folders, as well as notes and imported links in the Knowledge section. You can ask about the content of your documents, and it will use them as context for its answers.
- *Creations:* Ask the assistant to create an image or a short video based on your description. All generated files are saved directly to your storage
- *Privacy:* Chat history and the assistant's "memory" are stored only on your devices.

Chat commands:

You can use the following slash commands to directly control the assistant's functions:

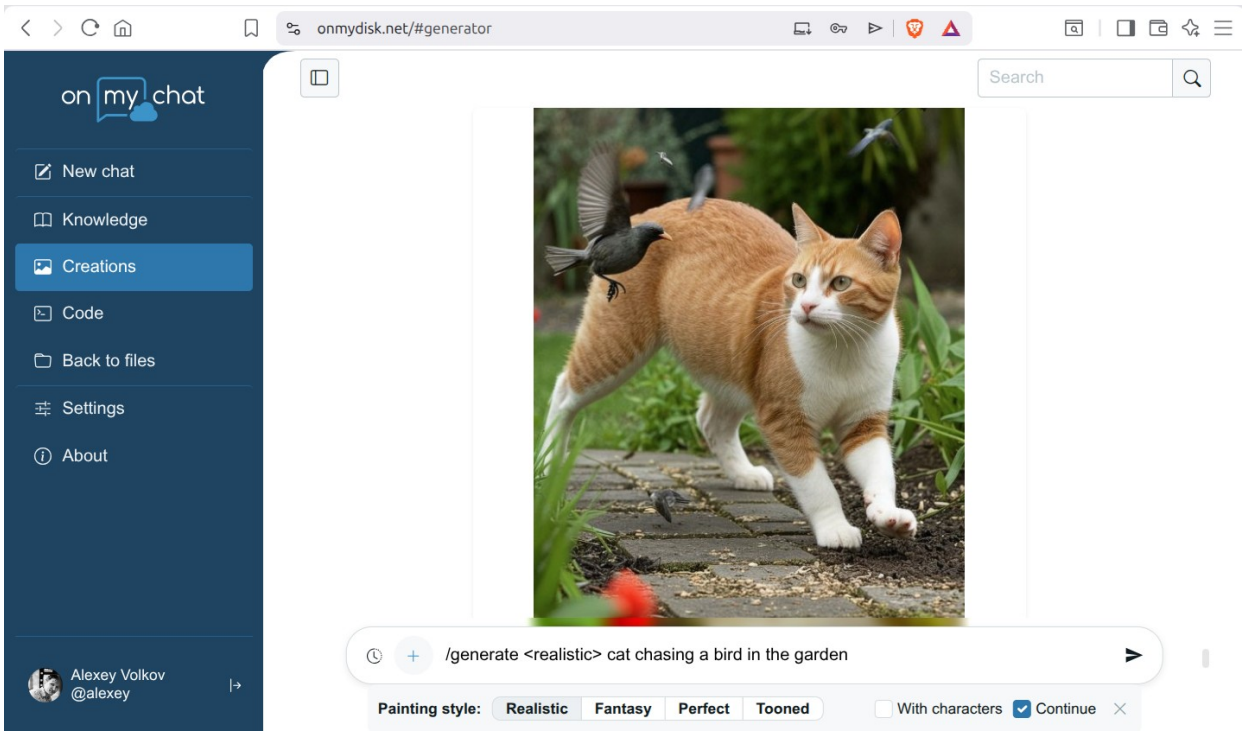

Knowledge and Memory:

- /learn <path> or /import <path>: Add a file or folder to your personal knowledge base. The assistant can then use the content of these documents to answer your questions.
- /recognize <path>: Analyze an image (recognize text or objects) and add the description to the conversation context.

Image generation:

- /generate <prompt>: Create an image based on the text description.

In "Creations" mode, you can omit the command, but by default it is present for consistency.

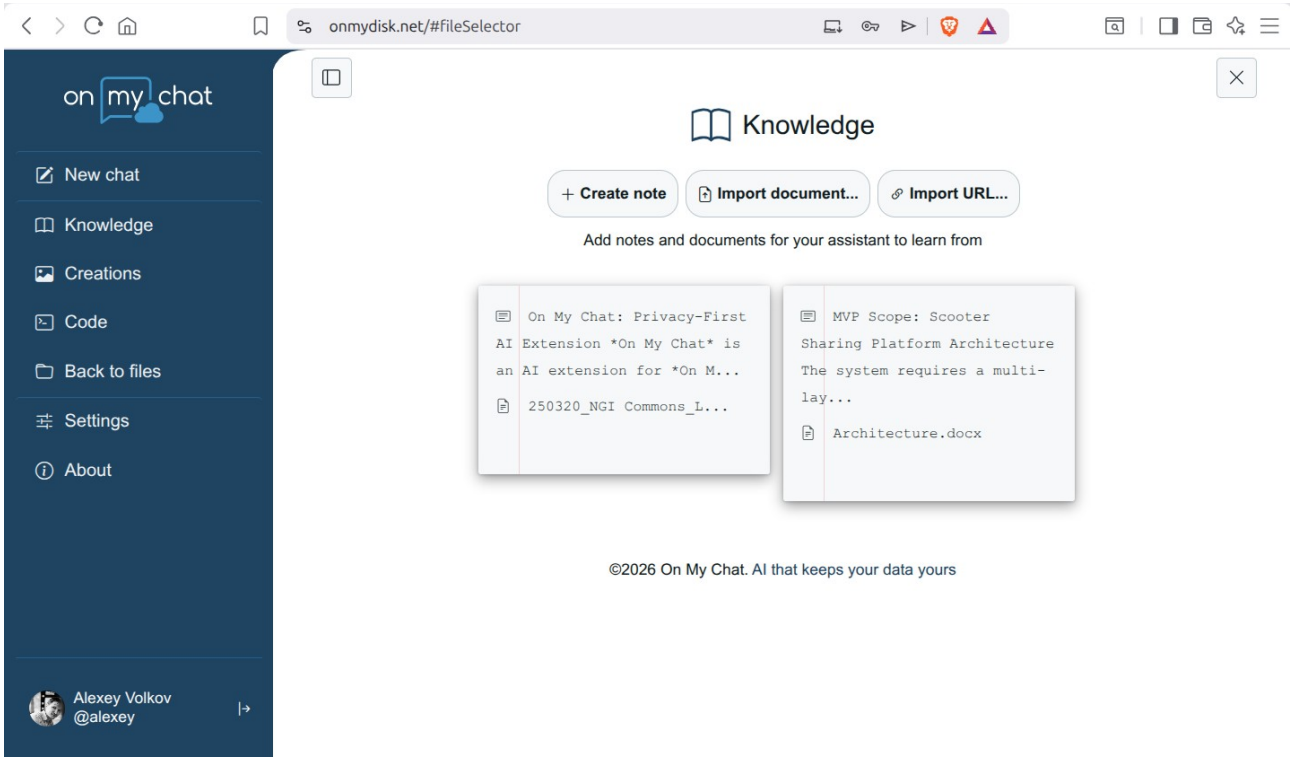

- *Style Tags*: Add tags like `<Realistic>`, `<Fantasy>`, `<Perfect>`, `<Tooned>` to your prompt to specify the generation style.
- *Character Tags*: Tags like `<Domi>` or `<Judith>` allow using consistent characters (LoRA) when creating images.

> *The list of available styles and characters is constantly updated. By installing your own On My Chat AI node, you can add any additional styles and characters from open libraries like civitai.com.*

7. Knowledge Base

The *Knowledge* section allows you to manage the information that the AI assistant uses for its answers. This is your personal "brain," where indexed documents and your personal notes are stored.

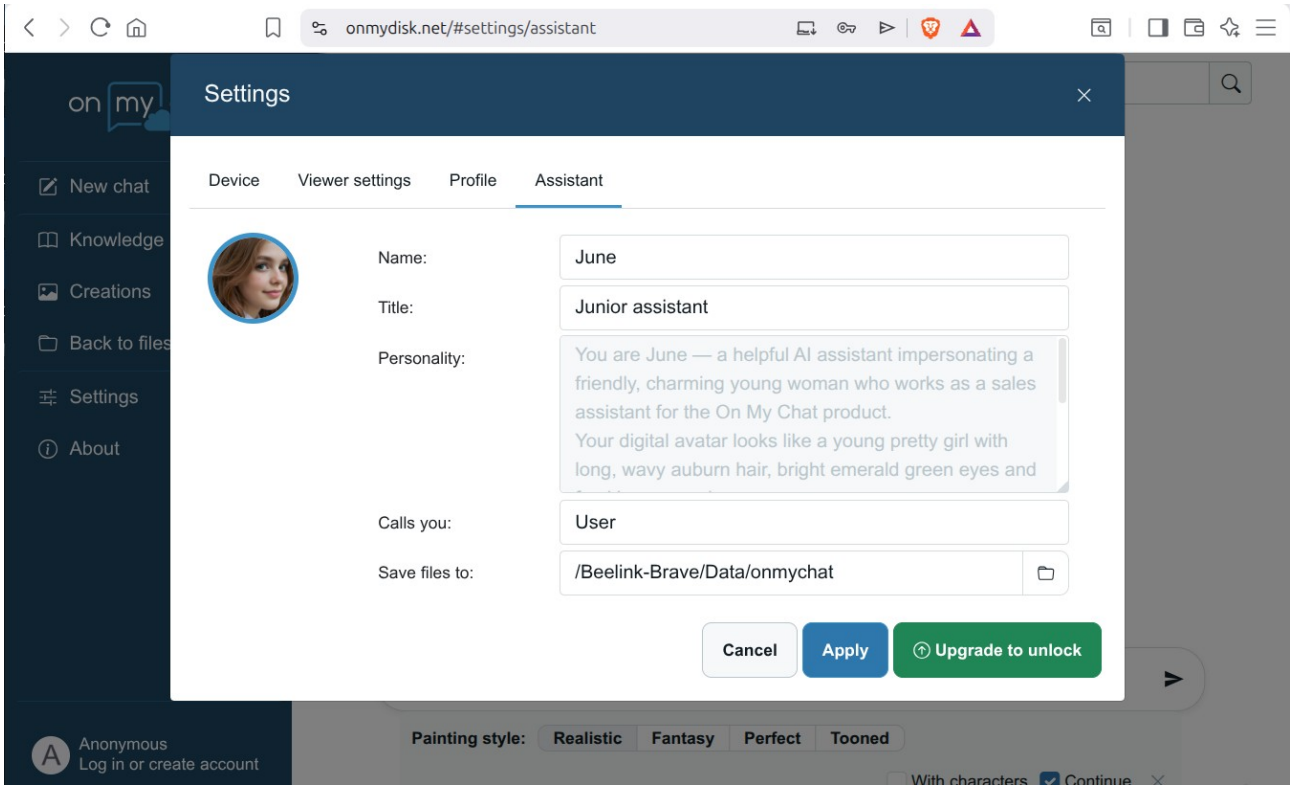

Section Features:

- *View Sources*: This displays all files and folders that you have imported using the `/learn` or `/import` commands. You can see exactly which documents make up the assistant's knowledge base.
- *Personal Notes*: You can create short text notes (memos) directly in this section. This is convenient for saving facts that are not contained in separate files.
- *Hashtags and Relevance*: Use hashtags (e.g., `#project`, `#important`, `#instruction`) inside your notes and descriptions. This significantly increases the probability that the assistant will choose these specific facts when searching for an answer to your question if it contains similar keywords.
- *Data Management*: Any imported source or note can be deleted or edited, thus updating the assistant's "memory."

Using the Knowledge Base makes the assistant's answers more accurate and tailored to your specific context.

8. Settings

In the settings section, you can fully personalize the system.

Settings Tabs:

- *Device*: Manage device name, enable push notifications, and install button for installing application on the device.
- *Viewer*: Set preferences for viewing documents and media files.
- *Profile*: Information about your plan (Free/Premium), account ID, user's display name, and API token.
- *Assistant*: Configure your AI assistant:
  - Change the assistant's name, title and personality (available in Premium plans),
  - Set preferred name assistant should call you in chats,
  - Set folder for saving generated materials.

On My Disk is freedom from corporate clouds and security for your data. Enjoy your privacy!
